

Industrial Camera Firmware Release Notes

1. This version is compatible with industrial camera firmware version:
DH-MV- A7500MG20E
2. Camera performance may be affected by some functions. Please contact Dahua support team before upgrading.
3. Usually you can receive the update firmware as a zip file from Dahua official website. Please unzip all the files inside and select correct bin file (Firmware file) to upgrade as we explained above. Do NOT select other files and do NOT select zip file directly as well.
4. Do NOT select firmware file to upgrade the camera if the camera model does not match. For example, use the update firmware file of DH-MV-A5501MG20E to upgrade the DH-MV-A5501CG20E. There is a high chance that the camera cannot work, after wrong firmware update process and you have to send the camera back to Dahua to repair.
5. Please turn off the Firewall (Mandatory) and any antivirus software (Optional) during the camera upgrading process.
