▶ SOLUTION

It is difficult for a large-scale hotel like Landmark Amman to patrol its grounds and premises by only relying on its security personnel. Moreover, without a competent surveillance system, there might be no standardized evidence for the police to check in case of an incident. There are two aspects of the old system that needed to be improved. First, the analog system that the hotel was using before was not easy to manage, with which many of its cameras were broken. The other challenge concerned old system’s storage, which couldn’t meet the requirement of local police.

The Dahua Technology’s CCTV solution comprised of IP camera and NVR solved the problems just right. IPC-HDW1431S, the 4MP WDR IR Eyeball Network Camera, supports Smart Coding(H.265+ & H.264+),Intelligent Video Analysis(IVS), Wide

Dynamic Range(WDR),Smart IR Technology, etc., which is fully capable of capturing 4 MP resolution images in hotels. The solution also included NVR4216-4KS2, the 32 Channel 1U 4K&H.265 Lite Network Video Recorder, which supports 4K and H.265 encoding technology, and can be served as edge storage, central storage or backup storage with an intuitive shortcut operation menu for remote management and control. With easy installation, it is compatible with numerous third-party devices making it the perfect solution for surveillance systems that work independently with video management system (VMS). It features an open architecture that supports multi-user access and is compatible with ONVIF 2.4 protocol, enabling interoperability with IP cameras.

▶ RESULT

Dahua surveillance system has helped Landmark Amman Hotel find a new way to enhance the guest experience by improving the the level of security, which reduced property damage and thefts in hotel. It also improved team cohesion and work efficiency of the hotel employees. Furthermore, the hotel could increase revenue by monitoring and invoicing according to actual numbers of guests, and be compliant with local authorities’ security and safety regulations.
